Career Opportunity Announcement
Senior Software Engineer (Full Stack)

at Packetized Energy
Location: Somerville, MA or Burlington, VT

Packetized Energy is seeking a highly motivated individual to join our team as a Senior Software Engineer working on our cloud systems. You'll be a software engineer building batteries: giant, distributed, energy storage systems (Virtual Batteries) made up of everyday things like home heating and cooling systems, water heaters and residential electric vehicle chargers. A clean energy future needs energy storage systems of this size and ours are the most flexible, scalable, and privacy-focused distributed energy resource management systems around.

Sound interesting? Packetized may be the company for you.

Our stack is primarily Javascript--Node.js running on a serverless architecture with a React frontend--but we don't care much about what languages or frameworks you've used in the past. Instead, we're looking for someone:

- Who cares about sound architecture and engineering practices
- Who can help us scale our core services and existing products to meet growing demand
- Who can take new products from whiteboard to MVP to production efficiently and effectively

Your responsibilities will include:

- Delivering high quality code daily
- Designing scalable cloud-based architectures within the AWS ecosystem
- Working closely with our product team and customers to understand requirements
- Ensuring that we always have people's comfort, privacy and security at the forefront of our design

- Staying on top of technical innovation in computer science, distributed systems, security, energy and IoT technologies
- Evaluating whether and when to incorporate new technologies into our stack
- Providing guidance to other engineers on the team through code reviews, pair coding and mentorship

Packetized Energy values diversity and inclusion and we encourage applicants from groups underrepresented in the tech industry. Packetized Energy is an equal opportunity employer.

Compensation and Benefits

This position pays $100K-$130K depending on experience. Additional benefits include stock options, health care, and a retirement savings plan.

Location

Packetized Energy is headquartered in Burlington, VT with an office in Somerville, MA (Greater Boston). This position can be based in either location.
